SUMMARY

AI & Data Science undergraduate with hands-on experience in developing Generative AI, Large Language Model (LLM), and Retrieval-Augmented Generation (RAG) applications using Python, LangChain, Flask, and NLP. Skilled in building intelligent document analysis systems, semantic search solutions, and data-driven applications using SQL and Power BI. Passionate about developing AI solutions that address real-world challenges in healthcare, governance, and enterprise automation.

EDUCATION

B.Tech – Artificial Intelligence & Data Science - Sri Shakthi Institute of Engineering and Technology | 2023–2027 | CGPA: 8.32
Higher Secondary Education - John Bosco Matriculation Higher Secondary School, Kovilpatti | State Board, 2023 | 83.66%

TECHNICAL SKILLS

- **Programming Languages:** Python, SQL
- **Artificial Intelligence & Machine Learning:** Machine Learning, Natural Language Processing (NLP), Retrieval-Augmented Generation (RAG), Optical Character Recognition (OCR), Prompt Engineering
- **Frameworks & Libraries:** Flask, LangChain, Scikit-learn, Pandas, NumPy
- **Data Analytics & Visualization:** Exploratory Data Analysis (EDA), Statistical Analysis, Power BI, Matplotlib
- **Databases:** MySQL
- **Developer Tools:** Git, GitHub, Jupyter Notebook, Excel, VS Code

CERTIFICATIONS

- Data Analytics with Skills.AI: Create Data Visualizations - Coursera
- Data Science Foundations - Great Learning

PROJECTS

- **BloodLink AI – Intelligent Emergency Blood Coordination System (Python | Machine Learning | Flask | SQL)**
Developed an AI-powered emergency blood coordination platform that connects blood donors, recipients, and blood banks through intelligent matching based on blood group compatibility, location, availability, and urgency. The system streamlines donor identification, provides real-time blood availability insights, and supports faster emergency response, enabling efficient blood resource management and reducing delays in critical healthcare situations.
- **FRA Atlas – AI and WebGIS Powered Decision Support System (Python | NLP | OCR | Leaflet.js | Geospatial Analytics)**
Developed an AI-powered WebGIS decision support system to address the challenges of manual Forest Rights Act record management and land ownership verification for tribal communities. The platform integrates Optical Character Recognition (OCR), Natural Language Processing (NLP), and geospatial analytics to digitize and extract information from forest land records, automatically map land ownership boundaries using Leaflet.js, and provide an interactive visualization platform for efficient record management. By reducing manual effort, improving record accuracy, and simplifying access to land rights information, the system empowers tribal communities with transparent and reliable documentation while supporting informed decision-making during the implementation of the Forest Rights Act.
- **DreamLens AI – Intelligent Dream Interpretation Platform (NLP | Semantic Analysis | Predictive Analytics) | Patent Filed**
Developed an AI-powered dream interpretation platform to help users understand the emotional and psychological meaning behind their dreams through intelligent language analysis. The system combines Natural Language Processing (NLP), transformer-based language models, semantic similarity, and sentiment analysis to interpret dream narratives, identify underlying emotions and recurring patterns, and generate personalized insights. By leveraging contextual language understanding, the platform delivers meaningful dream interpretations with approximately 85% prediction accuracy, making psychological self-reflection more accessible through AI.
- **AETHER – Enterprise RAG Knowledge Assistant (Python | LangChain | LLM | RAG | Flask)**
Engineered a Retrieval-Augmented Generation (RAG) system that processes 100+ PDFs, text documents, and images to deliver context-aware responses using semantic retrieval, vector embeddings, and Large Language Models, significantly improving response relevance by grounding AI-generated answers in source documents.
- **AI vs Human Review Analysis (Python | Power BI | Data Analytics)**
Conducted a comparative analysis of AI-generated and human-written product reviews using Python and data analytics techniques. Examined sentiment trends, review quality, writing patterns, and user engagement to identify key differences between AI- and human-generated content. Presented actionable insights through interactive Power BI dashboards to support data-driven decision-making.

ACHIEVEMENTS

- **2nd Place** – SQL & Data Quest Competition, Karpagam Institute Of Technology
- **Semi-Finalist** – Smart India Hackathon 2025
- **Top 15 Finalist** – VIT Chennai Hack-a-Cure Hackathon (Medical RAG Chatbot)
